

# Village Board Meeting

## July 2024

### Streets

- Mowing and trimming continues.
- Our summer employees have started. Both have completed necessary sexual harassment training.
- Jason and the summer kids are catching up on the mowing and trimming that got out of hand with pool prep.
- Jason and the summer kids went with the town for a day to help them with shoulder work.

### Pool

- We started with the regular cleaning out of debris with the pool.
- Ordered, and received, a new pool pump/motor for the filter that wouldn't prime last year.
- Jason and Mark cleaned and painted the pool.
- We had an issue painting the lines. After painting most of them a rain cloud came through and made the paint run. We had to use rags to wipe the pool clean. Got them painted the next day.
- After getting the pool full we ran into issues with priming the filters. After going through and taking out all of the ferncos and hard plumbing everything, we still had issues holding water in the main line. I had Aaron, from Cobleskill, come in with a camera to inspect the line. Found out the check valve in the pit wasn't holding. Also, a crack in the 90 that comes into the filter room. After all of that, we finally got the filters primed and running just 3 days prior to opening. It was clear and ready by opening day!

### Water

- The plant is running great.
- Received our test results for all of the testing they did for the CPE. From what ive seen, everything looks good.
- August 31<sup>st</sup> I will be doing a "debriefing" for the CPE. They want to go over some things before the final report is submitted.
- Another mailer was sent out, with the water bills, for the lead service line inspections. It stated the same as the last one with the exception that Mark and I will be knocking on doors for the next 3 months to complete these inspections.

## Sewer

- The plant is running well.
- Mark has passed his retake for the ABC exam. As of 11 am that day he is now a certified wastewater operator, grade 2A!!
